

## State Procured or Developed Tools and Services

Section 14.36, Florida Statutes establishes goals to increase alignment and efficiency of the state's workforce development system. Local Workforce Development Boards (LWDBs), Regions, and direct grant recipients must make efforts to reduce administrative costs and minimize duplication by using information technology to improve services.

[CareerSource Florida Workforce Policy O124 – Statewide Standardization of Tools and Services](#) – requires tools and services negotiated and acquired at the state level to be used by all LWDBs that have an identified need for the specific purpose for which the tools and services are acquired. LWDBs are prohibited from using funds sub-granted by FloridaCommerce for the purchase of tools and services that are duplicative of state-procured resources without an approved [waiver request](#). Waivers are limited to two years or until the contract expires, whichever occurs first.

When a state-procured tool or service is not available, LWDBs must attempt to first use common tools or services procured by a regional planning area. Regional planning areas can assist by negotiating improved rates for the LWDBs in their planning area. Prior to procuring separate solutions, LWDBs must show evidence of work with the local regional planning area to provide a common tool or service at a reduced rate.

The list below describes state-procured, workforce-specific tools and services developed in collaboration with FloridaCommerce.
